For Your Safety

It is solely the responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation, and maintenance of these products. When selecting products, the total system design must be considered to ensure safe, trouble-free performance. Material compatibility, product ratings and application details should be considered in the selection. Improper selection or use of products described herein can cause personal injury or property damage.

Contact your authorized HOKE® sales and service representative for information about additional sizes and special alloys.

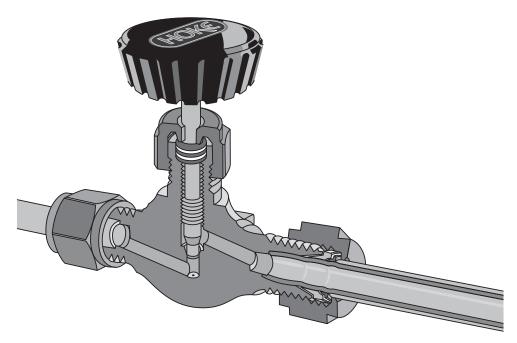

SAFETY WARNING:

HOKE® products are designed for installation only by professional suitably qualified licensed system installers experienced in the applications and environments for which the products are intended. These products are intended for integration into a system. Where these products are to be used with flammable or hazardous media, precautions must be taken by the system designer and installer to ensure the safety of persons and property. Flammable or hazardous media pose risks associated with fire or explosion, as well as burning, poisoning or other injury or death to persons and/or destruction of property. The system designer and installer must provide for the capture and control of such substances from any vents in the product(s). The system installer must not permit any leakage or uncontrolled escape of hazardous or flammable substances. The system operator must be trained to follow appropriate precautions and must inspect and maintain the system and its components including the product(s) and at regular intervals in accordance with timescales recommended by the supplier to prevent unacceptable wear or failure.

needle valves

Needle Valves at a Glance

HOKE® manufactures a complete line of precision needle valves. Before making your valve selection, be sure to consider the system pressure, operating temperature, required flow and materials of construction. If your application requires a valve not available in this catalog, please contact your HOKE® stocking distributor or call HOKE® at (864) 574-7966.

In addition to the needle valves in this catalog, HOKE® manufacturers other lines of specialty needle valves:

- Cylinder valves provide safe flow control for filling and draining cylinders. Valves are available with burst disks, spring relief devices, and metal or PCTFE stem tips. For more information, refer to HOKE®'s Sampling Cylinders and Accessories catalog (PN 79008).
- Gauge valves are typically used for calibration, isolation, and bleeding of gauges and other instruments. They allow for safe installation and removal of instruments and provide multiple mounting positions. For more information, refer to HOKE®'s Fluid Control Component catalog (PN 79020).
- Plug valves are used in applications where instant on/off service is necessary. HOKE® plug valves are available in quarter-turn (7300 series) or rising stem (7400 series) models. Both designs include a straight through bore, which provides maximum flow and rodability. For more information, refer to the 7300 series catalog (PN 79039) and the 7400 series Catalog (PN 78165).

Needle Valves at a Glance

Dyna-Pak® Stem Packing System

Dyna-Pak® provides superior sealing performance while reducing maintenance costs. Consisting of alternate wafers of TFE and metal spacers, stem leakage is virtually eliminated while the problems associated with TFE cold flow are minimized.

As the packing nut is tightened, metal spacers squeeze the TFE wafers, driving the TFE against the stem. At the stem, forces are concentrated and the TFE wafers provide multiple line seals. In addition to squeezing the TFE wafers, the metal spacers help contain the TFE and drastically reduce its ability to creep.

Dyna-Pak® packing has the ability to:

- Utilize system pressure to increase effectiveness in eliminating leakage
- Provide reduced operating torque
- · Help eliminate fugitive emissions
- Reduce the need for frequent packing adjustments
- Operate in temperatures from -65° to +450° F (-54° to +232° C)

STEM Concentrated force provides excellent seal Metal wafers reduce cold flow Multiple seals Uses system pressure to help seal Low operating torque

HOKE® Needle Valves are Offered With a Choice of Stem Tip Options to Provide Greater Flexibility

Blunt Vee-Point The blunt vee-point stem tip provides full flow with only a few turns of the valve handle

Regulating The regulating stem tip has a gradually tapered tip which allows for greater control of flow.

Non-rotating Metal Stem Tip

A non-rotating stem tip is typically used in high cycle applications to extend the service life of the valve. Its purpose is to prevent galling in the seat and on the stem tip. As the valve is closed, the stem tip contacts the valve seat, and is driven straight into it without rotating.

Vee-Point The vee-point stem tip is used to provide leak-tight shutoff in small orifice valves.

PCTFE A PCTFE stem tip requires a lower seating torque than a metal stem tip. It will provide full flow through the valve with only a few handle turns. The PCTFE tip is replaceable and has a maximum temperature of +250° F (+121° C)

Non-rotating PCTFE Stem Tip

A non-rotating PCTFE stem tip operates in the same fashion as the non-rotating metal stem tip but requires less seating torque.

Flow capacity of HOKE® Needle Valves

The Cv factor is a flow coefficient expressing the rate of flow in gallons per minute of 60° F (16° C) water with a pressure drop of 1 psi across the valve. The flow is dependent on the inlet and outlet pressures, temperature, specific gravity and the Cv coefficient.

To determine the Cv or flow of a liquid @ 60° F (16° C):

$$\mathbf{Cv} = \frac{\mathbf{GPM}}{\sqrt{\frac{\Delta p}{2 - Q}}}$$

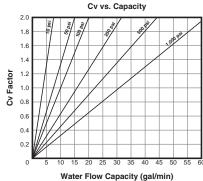

$$\mathbf{Cv} = \frac{\overline{\mathbf{GPM}}}{\sqrt{\frac{\Delta p}{\mathrm{S.G.}}}}$$
 or $\mathbf{GPM} = \mathbf{Cv} \sqrt{\frac{\Delta p}{\mathrm{S.G.}}}$

where:

 $\Delta p = p_1 - p_2$

p, = inlet pressure in psia $p_2 = outlet pressure in psia$ GPM = flow in gallons per minute

S.G. = specific gravity of liquid where water = $1 @ 60^{\circ} F (16^{\circ} C)$

To determine the Cv or flow of a gas @ 70° F (21° C):

where:

 $\Delta p = p_1 - p_2$

p, = inlet pressure in psia $p_2 = outlet pressure in psia$

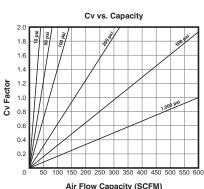

SCFH = flow in standard cubic feet per hour

S.G. = specific gravity of gas where air = 1 @ 70° F (21° C) and

14.7 psia

T = temperature in ° F

Note: Maximum effective Δp for compressible fluids is $\frac{1}{2}p_1$.

Forged Body, Integral Bonnet Needle Valves

These affordable valves are suited for a wide variety of process control applications. Non-rotating stainless steel or replaceable PCTFE stem tips reduce galling. Dyna-Pak® packing below the stem threads prevents fugitive emissions.

Typical Applications

- Cylinder valves
- Panel board instrumentation
- Pressure gauge valves
- Sampling systems
- Research laboratories
- Oxygen service
- · Corrosive or high pressure service

Features & Benefits

Safety

 Lock nut secures packing nut to prohibit accidental removal

Long cycle life

- Packing below stem threads prevents fluid from contacting the stem threads
- Non-rotating hardened 17-4PH stainless steel, MONEL® or replaceable PCTFE stem tip is combined with a hardened 450 stainless steel or MONEL® thread gland to reduce galling

Helps eliminate fugitive emissions

 Dyna-Pak® packing provides a leak-tight seal with low operating torque

Reliability

 All valves are tested for bubble-tight leakage at both seat and packing

Installation variety

 Broad selection of male NPT, female NPT, and GYROLOK® fractional or metric tube fitting connections

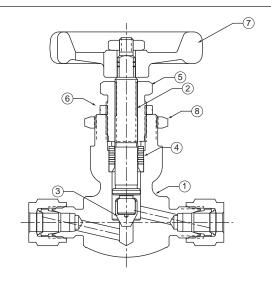

Panel mounting

- Panel mounting is standard on all models
- Special High Tolerance NPT Thread

Ordering Options

Spare Parts

Spare parts and repair kits are available for all needle valves. Please contact your distributor for specific information.

Cleaning and Testing

When ordering, please specify if oxygen cleaning or helium leak testing is required.

Additional Sizes

Additional sizes and options are available on special request. Please consult your local HOKE® distributor.

Bar Stock, Screwed Bonnet Needle Valves

This panel mountable, two-piece design is available in globe and angle patterns for flexibility of installation. Dyna-Pak® packing provides leak-tight sealing with low operating torque. Optional Graph-Lock® packing is available for high-temperature applications. The safety back-seating prevents accidental removal of the stem.

Typical Applications

- Hydraulic systems
- High temperature service to +600° F (+316° C)
- Gas sampling
- Test stands

Spare parts and repair kits are available for all needle valves. Please contact your distributor for specific information.

Cleaning and Testing

When ordering, please specify if oxygen cleaning or helium leak testing is required.

Additional Sizes

Additional sizes and options are available upon special request. Please consult your local HOKE® distributor.

Bar Stock, Screwed Bonnet Needle Valves

Dyna-Pak® packing below the stem threads, a hardened thread gland and a HASTELLOY® C-276 stem tip keep valves leak-tight while providing long cycle life. A choice of two flow capabilities enables use in a variety of severe service applications.

Typical Applications

- Corrosive handling
- Sampling systems
- Metering service

Technical Data

BODY*	316 stainless steel
MAXIMUM OPERATING PRESSURE	5000 psig @ 70° F (345 Bar @ 21° C)
OPERATING TEMPERATURE RANGE	-65° to +450° F (-54° to +232° C)
ORIFICE SIZES	0.086" to 0.313" (2.2 mm to 8.0 mm)
Cv FACTORS	0.12 to 1.40

^{*} Consult factory for other materials

Features & Benefits

Safety

 Lock pin prevents accidental bonnet disengagement

Durability

• HASTELLOY® C-276 stem tip provides long service life

Extended temperature range

Dyna-Pak® packing

Reliability

• All valves are tested for bubble-tight leakage at both seat and packing

Extended cycle life

• Dyna-Pak® packing below stem threads prevents washing away of thread lubricant and contamination of process fluid

Installation variety

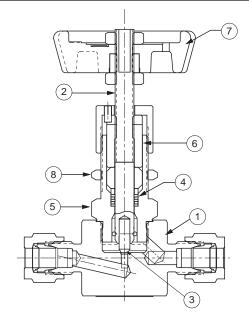

• Choose from a broad selection of male NPT, female NPT and GYROLOK® tube fitting connections in globe or angle patterns

Panel mounting

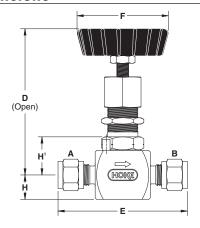

- Panel mounting is standard on all models
- Special High Tolerance NPT Thread

Materials of Construction

	DESCRIPTION	MATERIAL

Ordering Options

Spare Parts

Spare parts and repair kits are available for all needle valves. Please contact your distributor for specific information.

Cleaning and Testing

When ordering, please specify if oxygen cleaning or helium leak testing is required.

Additional Sizes

Additional sizes and options are available on special request. Please consult your local HOKE® distributor.

Severe Service Needle Valves

The HOKE® 2219 Needle Valve is an excellent choice for many steam- and severe service applications. Grafoil® packing below the stem threads provides exceptional service at temperatures up to +1000° F (+538° C). The nonrotating 316 stainless steel stem tip prevents galling.

Typical Applications

- Steam service in power plants
- Hot condensates

Technical Data

BODY MATERIAL	316 stainless steel, carbon steel, HASTELLOY® C-276, and MONEL®
MAXIMUM OPERATING PRESSURE	6000 psig @ 70° F (414 Bar @ 21° C)
PROOF PRESSURE SAFETY FACTOR	2:1
BURST PRESSURE	4:1
TEMPERATURE RANGE	-100° F to + 1000° F @ 1750 psig max. (-75° C to + 538° C @ 120 bar max.)
ORIFICE SIZES	0.170", 0.250", 0.312", and 0.437" (4.3 mm, 6.4 mm, 7.9 mm, and 11.1 mm)
C _V FACTORS*	0.47, 1.09, and 1.20

^{*} C_V factor for 0.437" orifice not available at time of publication

Features & Benefits

- Meets ANSI 900# specifications
- Grafoil® packing below threads isolates threads from media.
- Non-rotating 316 stainless steel stem tip prevents galling
- High pressure / high temperature use
- All standard components are 316 stainless steel
- Standard 316 stainless steel cast handle
- Fractional end connections available up to 1"; metric end connections up to 25 mm
- GYROLOK®, female NPT, NPS-, or tube socket weld end connections
- Bubble-tight leak testing at both seat and packing
- Special High Tolerance NPT Thread

Bar Stock, Screwed Bonnet Needle Valves for Sour Gas Service

Featuring packing below the stem threads, nonrotating metal stem tip, hardened thread gland and a 316 stainless steel body, these valves are well suited for sour gas applications as well as other severe service applications.

Typical Applications

- Refineries
- Chemical processing
- Oil and gas exploration

Technical Data

BODY	316 stainless steel
MAXIMUM OPERATING PRESSURE	6000 psig @ 70° F (414 Bar @ 21° C)
OPERATING TEMPERATURE RANGE	-65° to +450° F (-54° to +232° C)
ORIFICE	0.187" (4.8 mm)
Cv FACTOR	0.60
END CONNECTIONS	½" female x ½" female NPT

Features & Benefits

Safety

 Lock pin secures packing nut against accidental removal

Sour gas service

• Materials offer corrosion-resistant properties where hydrogen sulfide is present.

Corrosion resistance

• All wetted parts constructed of high chrome, high nickel austenitic stainless steel provide uniform chemical corrosion properties

Helps eliminate fugitive emissions

• Dyna-Pak® packing below the stem threads prevents fluid from contacting stem threads

Extended cycle life

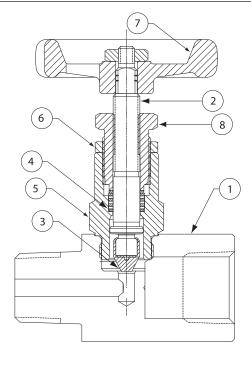

• Nonrotating 17-4PH stainless steel stem tip and XM-19 stainless steel stem prevent galling

Reliability

- All valves are tested for bubble-tight leakage at both seat and packing
- Special High Tolerance NPT Thread

Materials of Construction

Ordering Options

Spare Parts

Spare parts and repair kits are available for all needle valves. Please contact your distributor for specific information.

Cleaning and Testing

When ordering, please specify if oxygen cleaning or helium leak testing is required.

Additional Sizes

Additional sizes and options are available on special request. Please consult your local HOKE® distributor.

Forged Body, Union Bonnet Needle Valves

For the most severe service applications, these valves feature a stem backseat for safety, a long cycle life with high temperature capability to 700° F (370° C), and a union bonnet for safe, convenient maintenance.

Typical Applications

- High temperature service to 700° F (370° C)
- Corrosive handling
- Reactive and hot condensates

Technical Data

BODY	316 stainless steel
MAXIMUM OPERATING PRESSURE	Grafoil® packing: • 4000 psig @ 70° F (276 Bar @ 21° C) • 2500 psig @ 700° F (172 Bar @ 370° C) Dyna-Pak® packing: • 5000 psig @ 70° F (345 Bar @ 21° C)
OPERATING TEMPERATURE RANGE	Grafoil® packing -100° to +700° F (-75° to +370° C) Dyna-Pak® packing -40° to +450° F (-40° to +232° C)
ORIFICE	0.312" (7.9 mm)
Cv FACTOR	1.10

Features & Benefits

Safety

- Integral stem backseat
- Union bonnet design

High temperature service

 Grafoil® packing ring located below stem threads extends service to 700° F (370° C)

Extended cycle life

- 17-4PH stainless steel hardened stem with dry film lubricant on threads and hardened thread gland for increased thread life
- Nonrotating hardened stem tip prevents galling

Reliability

• All valves are tested for bubble-tight leakage at both seat and packing

Installation variety

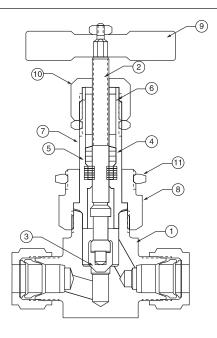

• Choice of GYROLOK® tube fittings, female NPT, or tube socket weld connections

Panel mounting

- Panel mounting is standard on all models
- Special High Tolerance NPT Thread

Forged Body, Integral Bonnet Needle Valves

Offered in four different body materials, this group of valves can handle a wide range of general purpose liquid and gas applications. Six types of stem tips are available, including two styles of vee-points.

Typical Applications

- Instrument air lines
- Sampling
- Gas chromatography
- Test stands
- Cylinder valves

Technical Data

BODY*	316 stainless steel, MONEL®, carbon steel, brass
MAXIMUM OPERATING PRESSURE	316 stainless steel, MONEL®, carbon steel 5000 psig @ 70° F (345 Bar @ 21° C) Brass 3000 psig @ 70° F (207 Bar @ 21° C)
OPERATING TEMPERATURE RANGE	Metal stem tip -65° to +450° F (-54° to +232° C) PCTFE stem tip -20° to +250° F (-29° to +121° C)
ORIFICE SIZES	0.060" to 0.312" (1.5 mm to 7.9 mm)
Cv FACTORS	0.07 to 1.10

^{*} Consult factory for other materials

Features & Benefits

Safety

• Integral bonnet provides differential thread pitch between stem threads and packing nut thread preventing accidental stem removal

Stem tip options

• A choice of PCTFE, metal, vee-point, blunt veepoint, or regulating stem tips

Helps eliminate fugitive emissions

• Dyna-Pak® packing provides a leak-tight seal with low operating torque in deep vacuum or high pressure applications

Dependability

• All valves are tested for bubble-tight leakage at both seat and packing

Installation variety

• Broad selection of male NPT, female NPT, and GYROLOK® fractional or metric tube fitting connections

Handle options

 Color-coded handles are available for identifying system fluids

Panel mounting available

All models can be ordered for panel mounting

Easy maintenance

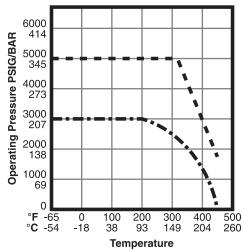

- All models can be panel mounted without packing disruption. Packing can be adjusted without removal from panel
- Special High Tolerance NPT Thread

D-style panel mounting

O-ring Packing

O-ring packing is available for all 3700 and 3800 Series valves. For Buna-N o-ring packing, specify kit number 3700K1. For Viton® o-ring packing, specify kit number **3700K2**. For additional o-ring options, contact your local HOKE® distributor.

Panel Mounting

3700 & 3800 Series

D-style: HOKE®'s factory-installed panel mounting permits valve installation without disrupting the packing. In addition, future packing adjustments may be performed while the valve is mounted. Factory-installed panel mount D-style is available for all models except the 3732 Series (globe pattern, vee-point stem). To order, add a 'D' prefix to the model number (e.g., **D3712G4Y**)

P-style: Panel mounting kits may be field installed on all 3700 and 3800 Series valves (including the 3732 Series). Once the kit is in place, valves may be mounted without disrupting the packing. All future packing adjustments must be performed with the valve removed from the panel. To order, specify part number 306-86A, which contains one kit.

Panel mounting dimensions for 3700 & 3800 Series

Panel hole = 41/64" (16.2 mm) diameter

P-style panel mounting kits

Panel thickness = 3/16" (4.7 mm) maximum

3900 Series

P-style panel mounting kits for field installation are available. To order, specify kit number **3900K1**

Panel mounting dimensions for 3900 Series

Panel hole = $\frac{4}{4}$ " (19.4 mm) diameter Panel thickness = $\frac{5}{16}$ " (7.9 mm) maximum

Spare Parts

Spare parts and repair kits are available for all needle valves. Please contact your distributor for specific information.

Cleaning and Testing

When ordering, please specify if oxygen cleaning or helium leak testing is required.

Additional Sizes

Additional sizes and options are available on special request. Please consult your local HOKE® distributor.
