For Your Safety

It is solely the responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation, and maintenance of these products. When selecting products, the total system design must be considered to ensure safe, trouble-free performance. Material compatibility, product ratings and application details should be considered in the selection. Improper selection or use of products described herein can cause personal injury or property damage.

Contact your authorized HOKE® sales and service representative for information about additional sizes and special alloys.

SAFETY WARNING:

HOKE® products are designed for installation only by professional suitably qualified licensed system installers experienced in the applications and environments for which the products are intended. These products are intended for integration into a system. Where these products are to be used with flammable or hazardous media, precautions must be taken by the system designer and installer to ensure the safety of persons and property. Flammable or hazardous media pose risks associated with fire or explosion, as well as burning, poisoning or other injury or death to persons and/or destruction of property. The system designer and installer must provide for the capture and control of such substances from any vents in the product(s). The system installer must not permit any leakage or uncontrolled escape of hazardous or flammable substances. The system operator must be trained to follow appropriate precautions and must inspect and maintain the system and its components including the product(s) and at regular intervals in accordance with timescales recommended by the supplier to prevent unacceptable wear or failure.

Formed Sampling Cylinders & Accessories

HOKE® Sampling Cylinders are designed and manufactured to stringent U.S. Department of Transportation (DOT) specifications to provide long performance life and maximum safety to the user.

These cylinders are fabricated from seamless tubing or pipe with increased wall thickness in the threaded area, which prevents expansion when valves are installed. Completely formed ends maximize strength and eliminate potential leak paths. Internal sandblasting removes surface imperfections and removes foreign particles.

Single- and double-ended cylinders are available as standard in a variety of capacities from 10 milliliters to 3.5 gallons.

Typical Applications

- Sampling hydrocarbons in refineries and petrochemical plants
- Grab sampling for chromatographic analysis
- Snubbers in reactor feed lines
- Surge accumulators in High Pressure Gas Systems
- High Vacuum Systems as experimental chambers and molecular sieves
- Chemical reaction vessels

Features & Benefits

- Choice of 12 different capacities from 10 mL through 3.5 gallons.
- Cylinder ends come in 1/8", 1/4", 3/8" and 1/2" NPT female connections (depends on capacity).
- Standard cylinders are formed from seamless drawn 304 SS, 316 SS or MONEL® pipe or tubing.
- Precision spinning operation eliminates internal pockets and provides easy flow of the sample.
- All models are internally sandblasted to remove surface imperfections and eliminate foreign particles.
- Single- and double-ended cylinders in most capacities are available as standard.
- Rugged wall thickness – extra strength around threads.
- Cylinders may be ordered with valves, relief devices, dip tubes, carrying handles, collar and flanges and end caps.
- The interior of HOKE® cylinders are available with a special FEP lining which provides excellent lubricity and very low permeability. To order, add "TL" following the cylinder part number. Restek®, Silcosteel®, and Sulfinert® surface treatments available for many sizes. Consult factory.
- Special High Tolerance NPT Thread

sampling cylinders

Formed Sampling Cylinders

Formed Cylinders: 316 Stainless Steel only

Pressure ratings up to 5000 psig can be supplied as a special. Consult the factory for quotation of any cylinder rated above 1800 psig.

When testing to ASME specifications is required, contact HOKE® for quotation and specify maximum pressure and temperature

To learn more about DOT-rated Cylinders, please read HOKE® Spun Sampling Cylinders catalog, **Part #79006**.

Other Materials

Cylinders manufactured from other materials are available. Contact HOKE® for quotation.

PTFE-lined Cylinders

The interior of HOKE® cylinders are available with a special FEP lining which provides excellent lubricity and very low permeability. To order add "TL" following the cylinder part number.

How to Order

To order a HOKE® Sampling Cylinder, specify the model number based on capacity required, single- or double-end connections and end connection size.

Dimensions & How to Order

* For single-ended applications, order double-ended cylinder with plug part number **502B**.

** Standard models are non-DOT rated

Cylinders Accessories & Valves

Collars, Flanges, Caps, Carrying Handles

To enable the user to safely transport pressurized samples, HOKE® offers a variety of collar and flange assemblies, protective end caps and carrying handles. Collars can only be assembled at the HOKE® factory.

Other accessories can come completely assembled to a cylinder or may be ordered for field installation.

To order, specify the cylinder part number followed by the part number of the accessory.

All angle pattern valves shown in this catalog can be used with protective end caps. The globe pattern valves **3752M4Y2** shown on page 12 are the only globe pattern valves which can be used with protective end caps.

Dip Tubes

Dip tubes provide a vapor space of the specified volume in cylinders containing liquefied gases, allowing the liquid to expand as the temperature increases. Without adequate vapor space, a small temperature increase can cause the liquid to expand, increasing the pressure dramatically.

Refer to local regulations and other appropriate guidelines for safe cylinder filling limits for your application.

Dip tubes may be ordered in outages of 10, 20 and 30% to provide a respective filled capacity of 90, 80 or 70%. A 30% outage tube would “dip” into a cylinder to a point equivalent to the liquid level of a cylinder filled to 70% of its capacity. Dip tubes in other outages can also be ordered, contact the factory.

To ensure leak-tight performance, dip tubes must be properly welded to a fitting, valve, or relief device.

When ordering dip tubes on valves without cylinders, the cylinder model number or capacity must be identified.

Typical Dip Tube Installation

Cylinder Accessories & Valves

Safety Relief Devices

6711L64Y
Forged Body Style with Spring Relief

Saf-tee™ relief devices can be used with HOKE® sampling cylinders as an inexpensive safety device or as a pipe size adapter for connecting valves in the make-up of cylinder assemblies.

Two basic models are available to satisfy most pressure ranges. Spring relief models are recommended for applications where re-closure is required.

Rupture Disc models are supplied with a pre-bulged rupture disc which provides excellent resistance to a broad range of corrosive materials. A slip ring is placed between the vented hold-down plug and rupture disc to prevent damage due to torque transmission during assembly. A safety screen minimizes fragment release through the plug vents. The maximum operating system pressure should be limited to 80% of the nominal rating of the rupture disc for static operating pressure and ambient temperature. It should be limited to 70% if pressure pulsations occur or used at elevated temperature. The burst tolerance is within the ASME code guidelines.

Technical Data

OPERATING TEMPERATURE RANGE: -20° F to +250° F (-29° C to +121° C)

			H - 5400-6200 psi	SP6712K5**

* Normally supplied with DOT 3E-1800 and DOT 3A-1800

** Special order only. Please contact HOKE® for details.

Rupture Disc Kits

Replacement rupture disc kits include rupture disc, safety screen, slip ring, gasket and instruction sheet (see page 5).

Spring Relief Models

INLET NPT MALE	OUTLET NPT FEMALE	ORDER BY NUMBER	ADD CODE LETTER
1/4	1/4	6711L4Y	C - 350-400 psi
3/8	1/4	6711L64Y	D* - 540-600 psi

Ordering Instructions

1. Determine whether the relief range you require is served by a spring relief or a rupture disc model.
2. Order by part number, followed by code of the desired range. For example: **No. 6712L4YD**.
3. Replacement rupture disc kits may be ordered by part number shown in the rupture disc model chart.

Cylinder Accessories & Valves

Rupture Disc Replacement Instructions

1. Disassembly:

Loosen And Remove Safety Plug (5) And Cup Screen (2) Disassemble Remaining Components. Older Models May Not Contain A Cup Screen Or Slip Ring.

2. Cleaning:

Clean All Metal Parts Thoroughly With Acetone Or Other Suitable Solvent. Clean Non-Metallic Parts With Any Detergent Type Cleaner That Meets Mil-D-16791, Type 1.

3. Lubrication:

Lubricate Safety Plug (5) Threads Lightly With Krytox 206 Or Equivalent.

4. Assembly:

Assemble Gasket (3), Then Rupture Disc (4)* With Its Convex (Bulged) Side Facing Toward The Safety Plug (5), The Slip Ring (6), And The Safety Plug (5) With Cup Screen (2). Torque Safety Plug (5) To 100-150 In-Lbs.

Note:

The Rupture Disc Assembly Should Be Tested At 70% Of Its Rated Pressure Prior To Placing It Into Service.

Caution: Do Not Exceed 70% Of Rating During Test.

*** Do Not Use Any Rupture Disc (4) That Is Bent, Nicked, Dented, Or Otherwise Damaged.**

Spring Relief, Seat, Seat Ring, and Gasket Replacement Instructions

1. Disassembly:

Loosen and remove Safety Bushing (4) and disassemble remaining components.

2. Cleaning:

Clean all metal parts thoroughly with Acetone or other suitable solvent. Clean non-metallic parts with any detergent type cleaner that meets MIL-D-16791, type 1.

3. Lubrication:

Lubricate Safety Bushing (4) threads lightly with Krytox 206 or equivalent.

4. Assembly:

Caution: Only use spring rated same as original spring range as ordered from factory. Ensure that the seat/seat holder are centered on the seat ring during assembly.

Assemble gasket (2), seat ring (6) with seat outward (as shown) seat holder with seat (3&5), spring (7), and safety bushing (4). Torque safety bushing (4) to 100-150 in-lbs.

Spring Relief Spare Parts

1105-7B	Spring (350-400 PSI)
3004-4V	Seat
3004-5Y	Seat Ring
3004-6	Gasket
510-16A	Spring (540-600PSI)

BOM ID	Description	Qty
1	BODY	1
2	GASKET	1
3	SEAT	1
4	SAFETY BUSHING	1
5	SEAT HOLDER	1
6	SEAT RING	1
7	SPRING	1

Note:

The Spring Relief Valves should be tested to ensure that the required release pressure is achieved after assembly. If release pressure does not fall in range, consult factory.

Cylinder Valves

1700 Series Heavy Duty Cylinder Valves

Heavy duty compact line of 316 stainless steel and MONEL® forged body globe pattern valves features an integral bonnet suitable for ¼" and ⅜" NPT ended cylinders.

1711L4Y

Features

- Dyna-Pak packing provides a leak-tight seal with low operating torque
- Packing below stem threads prevents fluid from contacting threads
- Non-rotating hardened 17-4PH stainless steel or replaceable PCTFE stem tip prevents galling and extends valve life
- Hardened 450 stainless steel or MONEL® combination packing nut and thread gland for long stem thread cycle life
- Lock-nut secures packing nut, preventing accidental removal
- Flat wrench pads on body for easy valve installation
- Integral stem backstop for added safety

Cylinder Valves

1900 Series Cylinder Valves

1935L64Y

This durable line of angle pattern valves features a low profile shrouded handle which protects the valve against damage. Dyna-Pak TFE wafer packing provides a leak tight seal with low operating torque even at 6000 psi (414 bar) pressure.

Features

- 316SS or MONEL® construction
- Low profile aluminum shrouded stem handle protects stem against damage
- Dyna-Pak packing provides leak tight seal with low operating torque
- Packing below the stem threads prevents process fluid from contacting stem threads
- Non-rotating hardened 17-4PH stainless steel or replaceable PCTFE stem tip prevents galling and extends valve life
- Hardened 450 stainless steel combination packing nut and thread gland for long stem thread cycle life
- Integral stem backseat provides added safety and prevents accidental removal of stem
- Variety of end connections satisfy most cylinder valve applications
- Bonnet lock prevents accidental removal of threaded bonnet
- Angle flow pattern
- Lock-nut secures packing nut against accidental removal
- Flat wrench pads on body for easy valve installation
- Integral stem backstop for added safety

Cylinder Valves

2400 Series 1/2" Cylinder Valves

2464L84Y
with rupture disc

2466L84Y
with spring relief

2400 Series 316 stainless steel, forged body angle pattern valves, come with a union bonnet for increased safety and ease of maintenance.

Available with pressure rupture discs or spring relief devices as an integral part of the valve.

Features

- Forged body union bonnet design for ease of maintenance and maximum reliability
- Non-rotating hardened 17-4PH stainless steel tip prevents galling and extends valve life
- Dyna-Pak packing below stem threads prevents lubricant washout & contamination of process fluids
- Stem backseat provides added safety
- Available with integral rupture disc or spring relief. See page 5 for gasket, spring, seat, and rupture disc replacement instructions.

Ordering Instructions for Valves with Relief Devices

1. Determine whether the relief range you require is served by a spring relief or a rupture disc model.
2. Order by part number, followed by code of the desired range. For example: **No. 2424L84YD**.

Cylinder Valves

3700 & 3800 Series Cylinder Valves

Angle 3802L4Y

Globe 3752M4Y1

The 3700 & 3800 Series forged body cylinder valves are supplied in stainless steel for cylinders with 1/8" through 3/8" NPT threads.

Features

- Compact size for restricted areas
- Dyna-Pak packing provides a leak-tight seal and low operating torque
- Integral bonnet design
- Ergonomic black ABS plastic handle
- Flat wrench pads on body for easy valve installation
- Replaceable PCTFE stem tip or integral metal stem tip
- Choice of 303 or 316 stainless steel construction
- Globe or angle flow patterns
- **3752M4Y[] Series** are designed for use with cylinder protective caps and collars on 300 and 500 mL size cylinders. Low profile and extended end allows the valve and handwheel to clear the cap and cylinder collar

Technical Data

MAXIMUM OPERATING PRESSURE:	5000 psig (345 bar)
TEMPERATURE RANGE:	-65° F to +450° F (metal stem tip) -20° F to +250° F (PCTFE stem tip)
ORIFICE SIZES:	0.060, 0.170, 0.219
Cv FACTOR:	0.07 to 0.55

Materials of Construction

DESCRIPTION	303SS VALVES	316SS VALVES
Body	303SS	316SS
Stem	316SS	316SS
Stem Tip (Softseat)	PCTFE	PCTFE
Dyna-Pak Packing	PTFE/316SS	PTFE/316SS
Handle*	ABS	ABS

* 303 stainless steel metal handle is provided on models **3752M4Y[]**

Formed Sampling Cylinders

How to Collect Samples from Process Lines

It is often difficult to obtain pure samples of process fluids for laboratory analysis. To insure accuracy and safety of your sample, DOT regulations, elimination of contaminants, cost and simplicity of operation must be considered.

Here are four methods of collecting samples which we as manufacturers and suppliers of sampling cylinders and valves have seen successfully used.

Method I: Water Displacement

1. Use a double-ended HOKE® cylinder (either the LD or HD styles depending upon pressure requirements) with sufficient capacity and equip it with suitable HOKE® valves.
2. Fill the cylinder with water so that all contaminants in the cylinder are removed by displacement.
3. Attach cylinder to process line and open process line stop valve.
4. Open both valves on sampling cylinder, the inlet valve wider than the outlet and allow the process fluid to displace the water in cylinder.
5. When cylinder is filled (this is indicated when process fluid begins flowing out cylinder outlet valve), close outlet valve and then both inlet and stop valves and remove cylinder from process line.
6. Transport cylinder to laboratory and bleed off samples as required.

Method II: Evacuate Cylinder by Vacuum

1. Use either a double or single ended cylinder with valves, preferably packless type. Helium leak tested to insure leak tightness.
2. Evacuate the cylinder to remove contaminants.
3. Attach cylinder to process line.
4. Open inlet valve and draw off desired sample.
5. Close valve and remove cylinder from process line.
6. Draw samples from cylinder as required on mass spectrometer.

Method III: In Line By-pass of Process Line

1. Establish by-pass line or parallel line to main process line with facilities to insert sampling cylinder.
2. Insert double-ended cylinder in by-pass line.
3. Open both inlet and outlet cylinder valves wide and allow process fluid to flow through by-pass line and cylinder.
4. Permit flow to continue running until accurate sample is established.
5. Close valves and remove cylinder from process line.
6. Draw sample from cylinder when required.

Method IV: Positive Displacement

1. Use a double-ended cylinder equipped with suitable valves.
2. Attach one end of the cylinder to the process line and the other to a positive displacement pump which draws uniformly over a period of time.
3. Open process line and cylinder valves and begin drawing off a uniform sample over an established period of time.
4. When time period is completed, close valves and remove cylinder from process line.
5. Sample gathered is an example of fluid passed through process line over a given period.

The Small Bore Instrumentation Specialists

We specialize in small bore instrumentation products up to 2" that deliver benchmark performance quality & safety; provide the broadest array of superior alloy offerings in the market; decades of proven success in a wide range of industries; a roster of "who's who" customers & projects globally; original "Best Solution" engineering & designs; and are focused on continuous improvement in all aspects of our business.
